SUMMARY

Full-stack software developer with professional experience building production web platforms and native mobile apps. I work across the stack in C#/.NET, Angular, and Java, and ship native Android in Kotlin. Currently completing my BSc in Computer Science at the University of Padova (expected Oct 2026) while delivering client solutions in e-commerce, web portals, and intelligent transportation systems. Fluent in English (C1) and always exploring new technologies.

EXPERIENCE

Software Developer

TouchMultimedia S.r.l. | Sarcedo, Italy

Apr 2025 – Present

Touch Multimedia (founded 1996) designs and builds complex digital solutions — web portals, e-commerce platforms, and custom mobile applications.

- Built and maintained backend business logic and API services in C#/.NET powering client e-commerce and web-portal platforms.
- Developed responsive front-ends in Angular, shipping production features across multiple client projects.
- Delivered native Android applications in Kotlin, owning features end-to-end from spec to release.
- Worked full-stack on the implementation and ongoing maintenance of web platforms for a range of clients.

Technologies: C# / .NET, Angular, Kotlin, Bootstrap

Software Developer

TEC Systems Engineering S.r.l. | Padua, Italy

Oct 2024 – Mar 2025

TecSen (founded 2007) builds advanced solutions for traffic management and Intelligent Transportation Systems (ITS).

- Co-designed and implemented a modular Java platform for managing urban traffic lights and control systems, working alongside a team of Java developers.
- Built an automated PDF reporting tool with PDFBox, integrated into the platform's Java interface to replace manual report generation.
- Led R&D on traffic-light priority algorithms to improve urban mobility.
- Led development of the company website and several product-specific sites to modern standards of usability and performance.

Technologies: Java, Angular, Astro, Tailwind CSS

EDUCATION

University of Padova

Bachelor's Degree in Computer Science

Oct 2020 – Present | Expected graduation: October 2026.

Liceo Scientifico G.B. Quadri (Scientific High School)

Scientific Diploma (Applied Sciences)

Sep 2015 – Jul 2020 | Upper secondary diploma, applied sciences track. Final grade: 88/100.

SKILLS

Programming and markup languages: C# / .NET, JavaScript, TypeScript, Kotlin, HTML5, CSS, C, C++, PHP, Java

Frameworks and libraries: Angular, React, Astro, Tailwind CSS, Bootstrap, Three.js, Qt

Databases: MongoDB, PostgreSQL

Tools and platforms: Windows, macOS, Linux, VS Code, Git, GitLab, AWS, Docker, ClickUp

Design and 3D: Blender, Photoshop, Procreate, Unity

Currently learning: Node.js, Next.js, Electron

PERSONAL AND UNIVERSITY PROJECTS

SnoutSpace (2024)
SnoutSpace is a social networking platform where users can create profiles, share photos, and engage with content from other users, similar to Instagram and DeviantArt. Whether you're an artist showcasing your latest work, a photographer sharing your favorite shots, or just someone looking to connect with others, SnoutSpace provides a fun and interactive space to express yourself. Solo project, my role: full-stack developer.

Technologies: React, Tailwind CSS, Apollo GraphQL, PostgreSQL | snoutspace.vercel.app | github.com/IsThisDemi/snoutspace

PowsUp (2023–present)
PowsUp! is an Italian group that organizes furry events in Lazio and Central Italy. I manage the website and the general IT infrastructure together with three other developers. We are building a blog to post upcoming events; it is a work in progress, built with Astro and Contentful. Team of 10, my role: volunteer, front-end developer.

Technologies: Astro, Contentful, Tailwind CSS, pnpm, ESLint, Prettier | powsup.net | github.com/PowsUp/website

WhiskerWatcher (2024)
Object-Oriented Programming university project: a sensors application built with C++ and Qt. Solo project, my role: front-end developer, back-end developer.

Technologies: C++, Qt | github.com/IsThisDemi/WhiskerWatcher

FitnessCenter (2023)
Web Technologies university project: a website built with only plain HTML and CSS, fully WCAG 2.1 compliant, using PHP to connect to and manage data in a database. Team of 3, my role: front-end developer, back-end developer.

Technologies: HTML5, CSS, PHP, JavaScript | github.com/IsThisDemi/FitnessCenter

Svelasca (2023)
Databases university project: designing, creating, and populating a PostgreSQL database for a fictional company from a given specification, with queries run through the PostgreSQL library in C++. Solo project, my role: database modeler, back-end developer.

Technologies: PostgreSQL, C++ | github.com/IsThisDemi/progetto-basi-di-dati

Oziverse (2018–2020)
Oziverse was a social platform where people could build, share and play their own games. It had an active community and peaked at 60+ monthly active users. Team of 20, my role: founder, full-stack developer, game developer, moderator.

Technologies: HTML5, CSS, Bootstrap, PHP, JavaScript, Three.js, Unity
